Our Approach to Daily Inflation Statistics

1

Use scraping technology

2

Connect to thousands of online retailers every day

3

Find individual items

4

Store and process key item information in a database

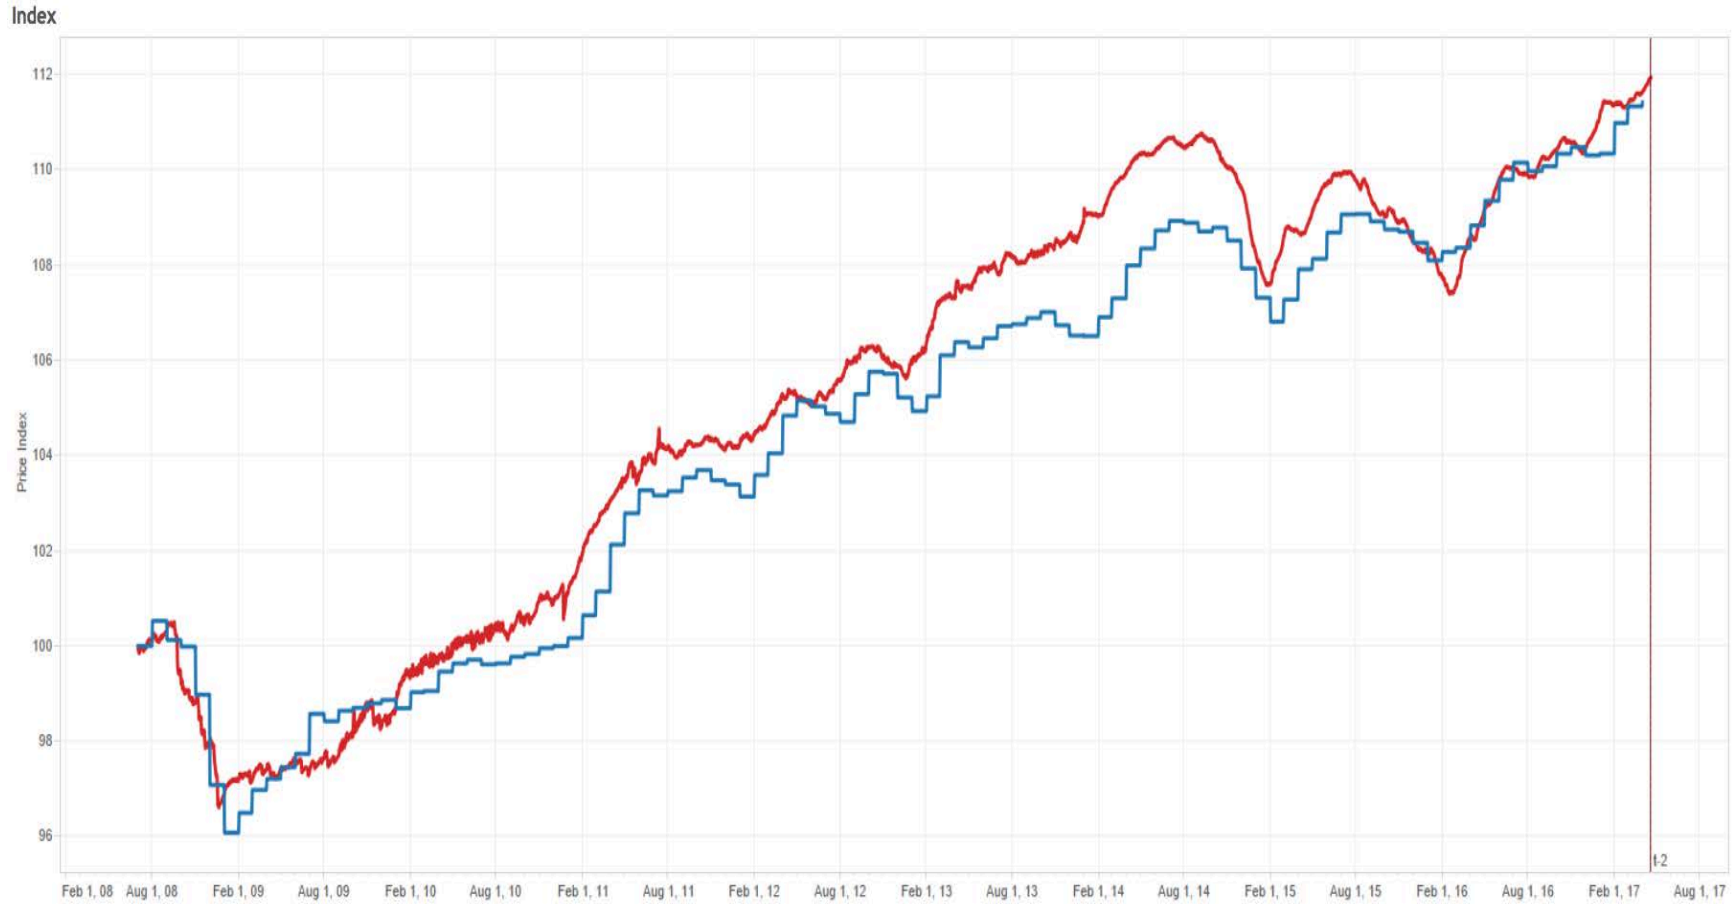

- *Date*
- *Item*
- *Price*
- *Description*

5

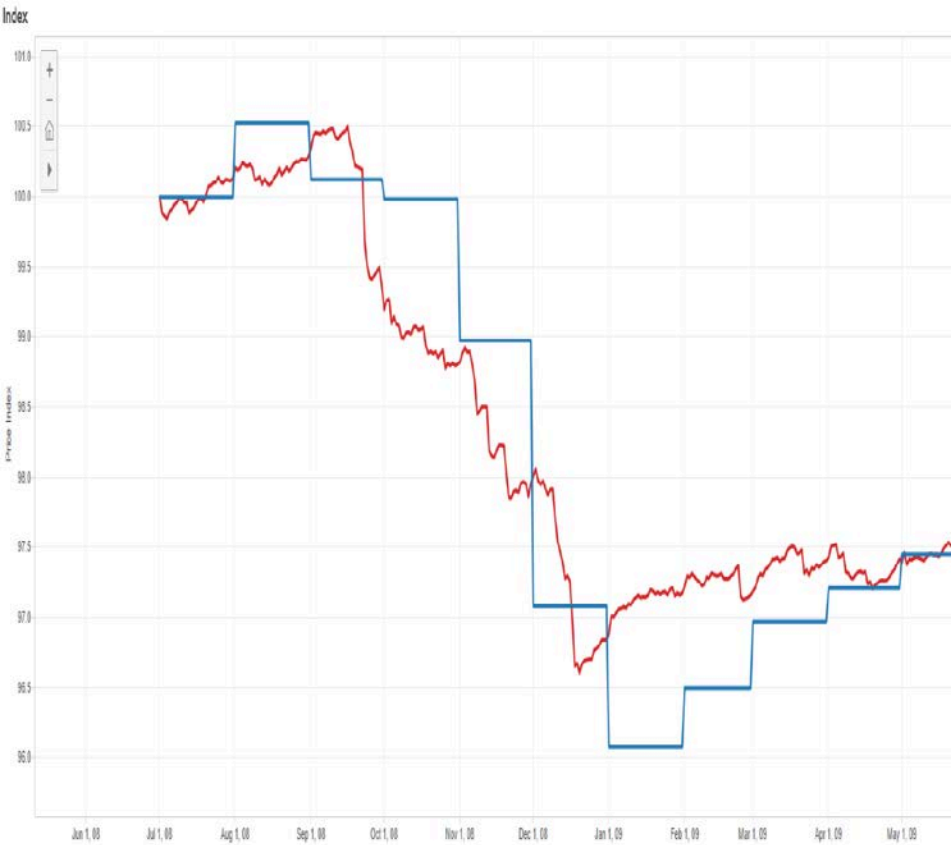

Develop daily inflation statistics for ~20 countries

Compare prices for a bottle of Coke
across countries

- Online prices represent an effective tool to measure PPP fluctuations
 - Identical items sold around the world
 - Detailed descriptions to achieve a nearly perfect matching
 - Daily Prices
- PPP indices:
 - More than 300 narrow product categories
 - With thousands individually matched items
 - In food, fuel, and electronics: we are missing clothing, personal care, household products.
 - Cars we will never match

Two exchange rates

- E: Nominal Exchange Rate
 - Determined in financial markets
 - Uncovered and covered interest rate parity
 - Order Flows
- E_{ppp}: Implied Exchange Rate
 - Computed from retailer's relative prices

Core

- Direct effect: exclusion procedure
 - Food, gasoline, taxes, etc. are part of the consumption basket.
 - The direct effect is eliminated by exclusion
- Indirect effect: pass-through procedure
 - Oil has an impact on gasoline, transportation, imported items, cost of energy, etc.
 - The indirect effect cannot be computed by exclusion procedures

US Core in the Long Run

US Core: Where are we now?

Possibilities

- New technologies allow us to gather data differently
 - Need to understand the mapping between the data and the information
 - More data is NOT always better
 - Understand the weaknesses in the data
- Working on more ambitious projects
 - Housing Inflation and Bubbles: USA
 - Labor Market Conditions: USA and Colombia
 - GDP: In Sao Paolo
 - Household Stress: España and Mexico
